Oct 10, 2022

Contents:

1	Indices and tables	5
	Index	7

Python Namesilo is API wrapper for Namesilo service. Currently we support following operations:

- registerDomain
- renewDomain
- checkRegisterAvailability
- listDomains
- getDomainInfo
- contactList
- contactAdd
- getAccountBalance
- addAccountFunds
- getPrices

<https://www.namesilo.com/Support/API-Manager>

class `namesilo.core.Namesilo` (*token*, *sandbox: bool = True*)

Creating Namesilo object with given token

Parameters

- **token** – access token from namesilo.com
- **sandbox** – true or false

add_account_funds (*amount*, *payment_id*)

Adding funds to Namesilo account

Parameters

- **amount** (*float*) – amount to add
- **payment_id** (*int*) – ID of payment (credit card)

Returns Status and amount after adding funds, example: (True, 150.00)

Return type tuple

add_contact (*contact*)

Adding new contact for current account

Parameters **contact** (`ContactModel`) –

Returns Status for adding contact

Return type bool

add_domain_privacy (*domain_name*)

Adds privacy to specified domain name

Parameters **domain_name** (*str*) – Domain name for adding privacy

Returns Status of action

Return type bool

auto_renew_domain (*domain_name: str*)

Set auto-renew to specific domain

Parameters **domain_name** (*str*) – Domain name

Returns Status of action

Return type bool

change_domain_nameservers (*domain, primary_ns, secondary_ns*)

Change name server for specified domain

Parameters

- **domain** (*str*) – Domain name
- **primary_ns** (*str*) – Primary name Server
- **secondary_ns** (*str*) – Secondary name server

Returns Status of action

Return type bool

check_domain (*domain_name*)

Check if domain name is available

Parameters **domain_name** (*str*) – Domain name for checking

Returns Availability of domain

Return type bool

delete_contact (*contact_id*)

Delete contact from NameSilo account

Parameters **contact_id** (*int*) – Contact ID

Returns

Return type None

get_account_balance ()

Returns current account balance

Returns current account balance

Return type float

get_domain_info (*domain_name*)

Returns information about specified domain

Parameters **domain_name** (*str*) – name of domain

Returns domain information

Return type DomainInfo

get_prices ()

Returns all prices for supported TLDs

Returns Prices for supported TLDs

Return type dict

list_contacts ()

Returns list of all contacts for current account

Returns list of all contacts

Return type list

list_domains ()

List all domains registered with current account

Returns list of registered domains

Return type list

lock_domain (*domain_name: str*)

Parameters **domain_name** (*str*) –

Returns

register_domain (*domain_name, years=1, auto_renew=0, private=0*)

Register a new domain name

Parameters

- **domain_name** (*str*) – name of domain
- **years** (*int*) – how long to register domain
- **auto_renew** (*int*) – turn on or off auto-renewal option
- **private** (*int*) – hide your private information (WHOIS)

Returns status of domain registration

Return type bool

remove_auto_renew_domain (*domain_name: str*)

Remove auto-renew to specific domain

Parameters **domain_name** (*str*) – Domain name

Returns Status of action

Return type bool

remove_domain_privacy (*domain_name*)

Removes privacy for specified domain name

Parameters **domain_name** (*str*) – Domain name for removing privacy

Returns Status of action

Return type bool

renew_domain (*domain_name, years=1*)

Renew domain name

Parameters

- **domain_name** (*str*) – domain name for renewal
- **years** (*int*) –

Returns status of renewal

Return type bool

unlock_domain (*domain_name: str*)

Parameters **domain_name** (*str*) –

Returns

update_contact (*contact: namesilo.core.ContactModel*)

Update existing contact with new information

Parameters **contact** ([ContactModel](#)) – new contact information

Returns status of action

Return type bool

class `namesilo.core.ContactModel` (***kwargs*)
Model for manipulating NameSilo contacts

Parameters

- **contact_id** (*str*) – Contact ID
- **first_name** (*str*) – First Name
- **last_name** (*str*) – Last Name
- **address** (*str*) – Address
- **city** (*str*) – City
- **state** (*str*) – State
- **country** (*str*) – Country
- **email** (*str*) – Email address
- **phone** (*str*) – Telephone number
- **zip** (*str*) – ZIP Code

static `convert_contact_model` (*reply*)
Convert standard Namesilo reply to ContactModel

Parameters **reply** – Namesilo Contact response

Returns Populated ContactModel from Namesilo

Return type *ContactModel*

CHAPTER 1

Indices and tables

- `genindex`
- `modindex`
- `search`

A

`add_account_funds()` (*namesilo.core.NameSilo method*), 1
`add_contact()` (*namesilo.core.NameSilo method*), 1
`add_domain_privacy()` (*namesilo.core.NameSilo method*), 1
`auto_renew_domain()` (*namesilo.core.NameSilo method*), 1

C

`change_domain_nameservers()` (*namesilo.core.NameSilo method*), 2
`check_domain()` (*namesilo.core.NameSilo method*), 2
`ContactModel` (*class in namesilo.core*), 3
`convert_contact_model()` (*namesilo.core.ContactModel static method*), 4

D

`delete_contact()` (*namesilo.core.NameSilo method*), 2

G

`get_account_balance()` (*namesilo.core.NameSilo method*), 2
`get_domain_info()` (*namesilo.core.NameSilo method*), 2
`get_prices()` (*namesilo.core.NameSilo method*), 2

L

`list_contacts()` (*namesilo.core.NameSilo method*), 2
`list_domains()` (*namesilo.core.NameSilo method*), 2
`lock_domain()` (*namesilo.core.NameSilo method*), 3

N

`NameSilo` (*class in namesilo.core*), 1

R

`register_domain()` (*namesilo.core.NameSilo method*), 3
`remove_auto_renew_domain()` (*namesilo.core.NameSilo method*), 3
`remove_domain_privacy()` (*namesilo.core.NameSilo method*), 3
`renew_domain()` (*namesilo.core.NameSilo method*), 3

U

`unlock_domain()` (*namesilo.core.NameSilo method*), 3
`update_contact()` (*namesilo.core.NameSilo method*), 3
